# Company Profile

Innovation is our motivation

**EuroChemi** is the youngest division of the HK Wentworth Group established in 1956 by Henry Kingsbury.

The electronics field has been the group's main focus from inception, where it has forged an enviable and dominant position in the supply of **Specialised Lubricants, Cleaners and Conformal Coatings** during the last 5 decades. Still family owned, we have offices and manufacturing capabilities throughout the World and can therefore provide an excellent service to our world wide customer base.

EuroChemi is a **New and Dynamic** supplier of **Chemical Cleaning and Maintenance** products to the **Rail Transport Industry**.

*Our main aim is to provide technological breakthrough products that add new dimensions to the solution of old problems and offer additional benefits to Train Operating and Rail Infrastructure Companies. After spending two years speaking and listening to the rail industry a range of products has been developed to meet industry needs.*

‘EuroChemi is fast becoming a key supplier of chemical cleaning and maintenance products and has gained high regard for its Research and Development capabilities’

Innovation is

Train cleaning is no ordinary task, soil deposits are different from those found on other forms of transport and tend to concentrate quickly once they have a foothold. Atmospheric pollutants, diesel exhaust vapour and molten steel deposits thrown up from the wheels, tracks & brakes combine to produce a tenacious and unsightly film.

The inside of train suffers from large numbers of people, captive in a small area.

*The effects of food and drink spillage, debris, graffiti, chewing gum deposits and dust are made more obvious in the confines of a carriage and present a difficult cleaning task.*

## 'EuroChemi benefits'

- Enhanced performance
- Environmental, and personnel safety benefits
- Additional benefits within financially acceptable parameters

### LocoWash 181 Cat No: 007/007419 Machine Wash Organic Acid

A soluble organic acid specifically designed to remove iron deposits and rust stains generated by wheel, track and braking systems, which are found upon train exteriors. In addition to its excellent cleaning ability, LocoWash 181 is fully biodegradable and does not crystallize, blocking spray heads and pipe work. Designed to be used manually or via automatic wash plant systems. It contains no volatile solvents and is inhibited against all metals used in rail carriage and engine construction.

*Independently tested by Scientifics Limited / 4-Rail.*

### LocoWash 282 Cat No: 007/007416 Manual Cleaning - Organic Acid Gel

Supplied ready to use for manual application. Its viscous properties allow longer contact time to remove iron stains from railway carriages and rolling stock. This non-aggressive yet effective cleaning action enables operators to complete their cleaning schedules safely and efficiently without the risks normally associated with hazardous oxalic acid cleaners.

*Independently tested by Scientifics Limited / 4-Rail.*

### LocoWash 304 Cat No: 007/007456 Machine Wash - Mild Alkali Detergent

A leader in the exterior train cleaning market producing enhanced cleaning performance. Exceptional rinse-ability provides a streak free gloss finish. Applied via automatic brush or flail wash systems or manually.

*Independently tested by Scientifics Limited / 4-Rail.*

### Restorer Cleaner Cat No: 007/007501

A multi-purpose cleaner, polish and protector. Its designed for use on rubbers, marble, slate, granite and other solid surfaces. It removes marks and leaves a protective glossy film.

*The product has been independently tested by 4 Rail.*

### Arctic Melt Cat No: 007/000120

An environmentally friendly, all in one de-icing solution. It has a fast acting and long lasting performance at low temperatures (minus 8 Celsius). Non-corrosive to metals and concrete and is fully biodegradable.

HK Wentworth

our motivation

‘Our innovation and development  
is totally focused upon the objectives  
that the industry seeks’
